

EHR cumulative project

To practice writing maintainable code, you will build up an EHR library in phases, with reviews at each phase.

Logistics

- ~6 stages
- ~1 stage released per week
- Accepted on a rolling basis
- Final deadline 4/19 (all phases due)

Workflow

```
write_code()  
open_pr()  
while not approved:  
    request_review()  
    if (requested_changes):  
        address_feedback()  
merge()
```

Workflow, cont.

GitHub allows requesting reviews and "assigning" people. The semantics of "assignment" are let up to specific projects.

Please "assign" qlanners or patrickkwang iff you require assistance *other than a review*, e.g. if you need clarification on requested changes.

If you do not assign or request a review, you may not receive any response.

If you are waiting on feedback for ≥ 3 days, ping the reviewer relentlessly.
